## Technical Skills

HTML, CSS, Bootstrap, Tailwind CSS

JavaScript, jQuery,

Java SE, Java EE (Servlets, JSP),  
Spring, Thymeleaf, MySQL

AWS, S3

Object-Oriented Programming,  
Test-Driven Development, Version  
Control with Git, Paired  
Programming

## Education

### Codeup

Certification of Completion  
Dec 2021 - Jun 2022

A fully-immersive, project-based,  
and intensive 20-week Full-Stack  
Java Career Accelerator that  
provides students with 670 hours  
of expert instruction in software  
development.

### University of Texas SA

BBA-Accounting  
December 2003

Completed four years of  
undergraduate business studies  
with a focus in accounting

Full-stack developer with a proven ability to perform in time-sensitive environments with hard deadlines while maintaining high-quality results. Able to self-start with the necessary skills to work alone while still possessing the ability to collaborate and add value to larger projects. Looking for an opportunity to develop applications that are artistically appealing, easily navigated, and dynamic resulting in increased traffic, page views, and user experiences.

## Development Projects

### [Clear to Close](#)

Clear to Close is a full stack application designed to streamline the home buying process. Multiple api's, including Google maps were integrated with our own Spring Boot API, allowing users to search for listings, make/counter/accept offers in real time. A Maria MySQL db and AWS S3 NoSQL db were combined for data storage. The user-friendly front-end integrates Tailwind CSS and Bootstrap for styling. Spring security handles secure registration and logins.

### [Movie Collection](#)

Paired development project creating a personal movie database. Allowed users to query IMDb db through a RESTful API. Movies were then added to a SQL db allowing personal edits to ratings, plots and supporting actors/actresses. Program features an API developed using Java and MySQL. Front end utilized Javascript, Flex-box, Bootstrap, HTML, CSS, and jQuery to manipulate the DOM and its elements.

### [Weather Map](#)

Solo development project featuring an interactive map with local weather functionality. Map and corresponding weather information were filtered from Mapbox API and Open weather API using AJAX to pull the data, vanilla JS to manipulate JSON objects, and JQuery to dynamically manipulate the DOM for a dynamic experience. Styling was handled using CSS, Bootstrap.

## Professional Experience

### **Taxidermist** - San Antonio, TX

*Owner/Contractor* / Jun 2003 - Jan 2022.

- Managed projects requiring alteration of multiple joints and axis to increase the artistic appeal and or anatomical correctness
- Met with customers and clients to determine project needs and prepared proposals incorporating production schedules, scopes of work, and budgets
- Performed research and received ongoing taxidermy training to remain current on trends, tools, and techniques
- Utilized reporting software to reconcile daily sales, returns, and financial reports
- Focus on quality and innovation led to collaboration on one of a kind projects from stand-alone dioramas to museum sized displays
